

AIR CONDITIONING

Details

Project: Beyond Autism School **Employer:** Beyond Autism School
Start: April, 2021 **Completion:** April, 2021 **Value:** £69,000

Project Details

KBH Building Services Ltd were awarded this project following a competitive tender submission. In conjunction with our partnering company, Inhaus Elemental Solutions, we successfully installed a water-cooled air conditioning system throughout the school; a specialist system that does not require any external components. The school had previously applied for planning permission for conventional air conditioning, but this was rejected by the local planning body, so our product was a perfect solution to their problem. Additionally, as requested by the school manager, we built bespoke, lockable cupboards, in keeping with the classroom setting, in keeping with the classroom setting, whilst preserving the decorative cornice detail throughout the building.
